Mold, North Wales

I have a new portfolio site that is essentially my digital resume, [take a look](#)

Profile

Senior Frontend Engineer with 20+ years of experience specialising in JavaScript, React, TypeScript, HTML, and CSS. I build scalable, high-performance web apps, with a focus on design systems and reusable UI components. Skilled in Agile environments, I work closely with designers in Figma and improve frontend architecture, code quality, and team performance through mentorship.

Tech Stack

JavaScript, React, TypeScript, NextJS, Vue, HTML, CSS, Jest, Node JS, REST API, Electron JS, Figma

Soft Skills

Mentoring, Collaboration, Problem Solving, Communication, Leadership

Experience

June 2025 - date

Lottoland, Remote

Stack

JavaScript, Karma, Sass

Senior Frontend Software Engineer

Contributed as part of a frontend engineering team maintaining and evolving a large-scale, multi-application platform. Worked on updating shared brand assets across numerous applications to ensure visual consistency, diagnosed and resolved production incidents to maintain platform stability, and contributed to dependency and package upgrades across multiple projects to reduce technical debt and improve build reliability. Gained experience working within a complex monorepo and service-oriented frontend architecture.

Oct 2024 - Mar 2025

Amiqus, Remote

Stack

JavaScript, Vue, Twig, Jest

Senior Frontend Software Engineer

Contributed to the development of a digital identity verification platform, building scalable and reusable Vue components and maintaining robust Jest test coverage to support stable, reliable releases. Participated actively in code reviews, helping uphold team standards for code quality, consistency, and maintainability while working in a regulated, security-conscious product environment.

Over six months, I mapped product data flows to improve onboarding and team understanding, helped shape a scalable design system, and introduced workflow improvements that streamlined ticket handling and boosted delivery speed.

Jul 2021 - Jan 2024

Gamma, Remote

Stack

JavaScript, React,
TypeScript, Redux,
Electron,
REST API, Jest, CI/
CD

Senior Software Engineer

Contributed to the re-platforming of a communications product into a cross-platform Electron application for Windows and macOS. Delivered core features including video calling, chat, screen sharing, and Outlook integration, while improving performance, accessibility, and overall user experience across platforms. Supported junior developers, CI/CD pipelines, automated testing, and the migration to TypeScript, helping improve code maintainability and development velocity.

Oct 2019 - Jul 2021

In The Style,
Manchester

Stack

JavaScript, React,
CSS, NextJS,
Figma, React
Native, Magento

Frontend Developer/UI Designer

At In The Style, a fast-growing online fashion retailer, I designed and developed user interfaces for the core website and mobile app using Figma, React, and Next.js. I focused on maintaining brand consistency and enhancing usability to deliver a seamless shopping experience across devices.

I led the adoption of a design system to streamline UI development, increasing efficiency and speeding up feature delivery. These improvements significantly boosted the user experience and customer satisfaction.

Jun 2015 - Oct 2019

Sofology, Golborne

Stack

JavaScript, React,
CSS, Umbraco

Frontend Developer

At Sofology, a leading UK sofa retailer, I developed React components for marketing and product pages, ensuring a smooth and engaging user experience. I led frontend standards by implementing a utility-first CSS approach, creating a scalable and maintainable codebase, while mentoring junior developers to support their growth.

I built a sofa product configurator that enabled customers to personalise their selections, improving engagement and conversion. I also created a dynamic marketing banner system, giving the content team greater flexibility to deliver high-impact visuals across the site.

Personal Projects

Github – <https://github.com/CodingToye>

After being made redundant from Gamma in January 2024, I used the opportunity to sharpen my skills and explore new technologies through a series of focused side projects.

Frontend Refresh Tool

[Project link](#)

A tool initially conceived to help me stay sharp with my frontend stack, has since become more advanced and is currently evolving into a fully fledged mock interview tool

Earthquake Prediction

[Project link](#)

An AI-powered dashboard that visualises historical earthquake data and uses a neural network to estimate future event metrics. Built with React, TypeScript, and Python, with testing in Jest. A key challenge was learning Python for data processing and model integration, which strengthened my cross-language development skills.

Weather Dashboard

[Project link](#)

A full-stack weather dashboard built with React, TypeScript, and Tailwind on the frontend, and Node + Express on the backend. It features real-time weather updates, location-based search, and dynamic UI based on conditions. I delivered a clean, responsive interface and quickly adapted to backend development, handling API integration and app logic for smooth end-to-end functionality.

JS Periodic Table

[Project link](#)

An interactive JavaScript Periodic Table that helps junior developers explore core JavaScript concepts without frameworks. Inspired by the chemical periodic table, it blends my passion for teaching and data visualization. Built with React, TypeScript, and Tailwind, it has two GitHub versions: one with a Node + Express API, and another deployed with Meteor.

Roadmap

<https://coding-toye-roadmap-2026.meteorapp.com/>

Born from my experience mentoring graduates and junior developers, this tool was designed to provide a clear, centralised roadmap of the fundamental skills needed to become a successful developer. Built using React, TypeScript, Node, and Express, it serves as a visual guide to support structured learning and ongoing growth in frontend development.

Education

University College of Manchester, Warrington Collegiate

1997-2000

Batchelor of Arts, Multimedia Journalism, IT and Business Management 2:2
